Supported Platforms & Devices

EventLog Analyzer supports event log and syslog data collection for over 80 manufacturers, hundreds of devices, platforms & services. Here is a partial list of supported data log sources.

Universal Log Parsing and Indexing (ULPI)

EventLog Analyzer's Universal Log Parsing and Indexing technology allows it to collect, analyze, search, archive and generate reports from any machine-generated logs, even from data sources not listed below, as long as the received log data is in non-encrypted, human-readable format.

Customer Speaks

"Windows Event logs and device Syslogs are a real time synopsis of what is happening on a computer or network. EventLog Analyzer is an economical, functional and easy-to-utilize tool that allows me to know what is going on in the network by pushing alerts and reports, both in real time and scheduled. It is a premium software Intrusion Detection System application."

Jim Lloyd

Information Systems Manager
